

DANA-FARBER Marathon Challenge

TO BENEFIT THE CLAUDIA ADAMS BARR PROGRAM IN INNOVATIVE BASIC CANCER RESEARCH

THE BARR PROGRAM: *It's all about IMPACT*

- Contributed to the discovery of the importance of “kinases” in cancer, helping to improve survival for certain patients with metastatic melanoma
- Identified mutations in the protein EGFR leading to increased survival rates in patients with these mutations
- Developed new approaches to activate the immune system against cancer, leading to immune therapies that improve survival for people with many types of cancer
